EDUCATION

2022 - Present
HALIC UNIVERSITY

- Software Engineering
- Undergraduate
- Final Year

SKILLS

- Project Management
- Communication & Critical Thinking
- Self-Learning
- System Architecture & Design
- Microsoft Office
- Prompt Engineering

PROFILE

Final-year Software Engineering student at Halic University with a strong foundation in AI integration and development, and software architecture. Passionate about building real-world software products using AI-powered workflows – from system design and backend architecture to deployment. Committed to leveraging modern AI tools to engineer scalable, impactful solutions and contribute meaningfully to the software industry.

WORK EXPERIENCE

Travel Time Agency

SEP 2021 - MAY 2025

Operation Manager

- Operated enterprise travel software systems (Galileo GDS, Quickress) for 3+ years in a professional environment
- Gaining practical exposure to booking pipelines, reservation databases, and business software workflows

Al-Rowad Training Program

2023 - PRESENT

Volunteer

- Coordinated scheduling and logistics for 37 training sessions (150+ hours) per cohort across 3 consecutive program cycles (2023–2025), totaling 450+ training hours.
- Liaised with 15+ speakers per cycle to confirm schedules, managed venue setup, video recording, and full technical support.
- Served as the primary point of contact between program leadership and participants.

TECHNOLOGIES

AI-ASSISTED

- AI-Assisted Development (Claude Code, Antigravity)
- Railway, Vercel, Docker
- React, Next.js
- PostgreSQL, Redis
- Node.js, Express, NestJS

LANGUAGES

- Arabic - Native Speaker
- English Intermediate
- Turkish Intermediate

PROJECTS

Sho Abalak? شو عبالك؟

2026 - Present

Multi-app food & store delivery platform — West Bank, Palestine

- Architected a full-stack delivery marketplace as a pnpm/Nx monorepo: NestJS API, PostgreSQL + Prisma, Redis, and Socket.io real-time engine, with 4 clients (customer, business, driver React Native/Expo apps + Next.js admin dashboard).
- Built end-to-end order lifecycle with a guarded status state machine, role-based JWT auth, live order tracking over WebSockets, and FCM push notifications across all apps.
- Implemented an admin control center: live oversight, business approvals, multi-tag business categorization, areas/commission management, and financial reports.
- Deployed to production (Railway API + Postgres + Redis, Vercel admin) with a separate staging environment and CI from GitHub.

FocusOura

2026 - Present

Gamified productivity web app - focusoura.vercel.app

- Built a full-stack app with JWT authentication, session management, and a 12-table PostgreSQL schema using Drizzle ORM; deployed as a pnpm monorepo with separate React/Vite frontend and Express.js backend.
- Integrated Google Gemini AI API to generate personalized study insights from user session data.
- Built gamification systems including virtual plant/pet progression, a virtual currency wallet, a cosmetics store, and social challenges between friends.

Arjwan Istanbul

Live e-commerce business website - arjwan.store

- Built and deployed a fully live e-commerce storefront for a perfume brand at arjwan.store, covering product catalog, checkout flow, and responsive design.
- Developed using modern web technologies (Next.js, TailwindCSS) with AI-assisted workflows; the site operates as an active commercial storefront.

CodeOura

Software services company web presence - codeoura.com

- Designed and developed the company's web presence from scratch using Next.js App Router and TypeScript.
- Integrated Firebase Firestore as the backend for dynamic content management.
- Deployed and maintained on Vercel with continuous delivery from GitHub.
