SUMMARY

Full-stack software engineer and final-year Software Engineering student (graduating February 2027) who ships complete products — from database schema and API design to real-time features, security and production deployment. Built a multi-app delivery marketplace (NestJS, PostgreSQL, Redis, React Native), working in an AI-assisted workflow backed by code review, automated checks and tests. Brings 3+ years of hands-on experience with enterprise booking systems in the travel industry.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Python, HTML, CSS
Backend: Node.js, NestJS, Express.js, REST APIs, Socket.io (WebSockets), JWT, OAuth 2.0
Frontend & Mobile: React, Next.js, React Native, Expo, Vite, Tailwind CSS
Data: PostgreSQL, Prisma, Drizzle ORM, Redis, Firebase (Firestore, Cloud Messaging)
DevOps & Testing: Docker, GitHub Actions, Railway, Vercel, Nx, pnpm workspaces, Jest, Git
AI & ML: Google Gemini API, scikit-learn, Edge Impulse (TinyML), AI-assisted development (Claude Code)
Spoken Languages: Arabic (Native), English (Upper-Intermediate, B2), Turkish (Intermediate)

PROJECTS

Sho Abalak — Multi-App Delivery Marketplace | *Pre-launch* May 2026 – Present
NestJS, PostgreSQL, Prisma, Redis, Socket.io, React Native, Expo, Next.js, Nx, Railway

- Built a food & store delivery platform for the West Bank as a pnpm/Nx monorepo: a NestJS API (80-model schema, 111 migrations) serving 3 Expo apps (customer, business, driver) and 3 Next.js web apps; 1,200+ commits over 5 months.
- Enforced the order lifecycle as a shared 9-status state machine with server-side role and ownership checks; moved driver-offer expiry from in-memory timers into the database with an idempotent cron sweep, so offers survive deploys.
- Made real-time updates work across multiple API replicas with the Socket.IO Redis adapter and Redis locks that run each cron job once per cluster, falling back gracefully when Redis is unavailable.
- Hardened security with refresh-token rotation and reuse detection, HttpOnly cookie sessions, Redis-backed rate limiting, and an automated check that blocks data leaks on public routes.
- Implemented commission, settlement and reversible ledger logic behind a filterable financial report; set up staging and production environments, CI build/type checks and ~480 API unit/e2e tests.

FocusOura — Gamified Study Platform | *focusoura.vercel.app* 2026
React 19, TypeScript, Express, PostgreSQL, Drizzle ORM, Gemini API, Expo

- Built a pnpm TypeScript monorepo (~16K LOC): React 19 + Vite SPA, 69-endpoint Express API, 18-table Drizzle schema.
- Found and fixed a double-spend race condition across 5 in-app wallet paths with atomic conditional updates, plus an optimistic lock so expiring challenges cannot pay out twice.
- Integrated Gemini coaching, idempotent per session with typed fallbacks; solved Google OAuth being blocked in Android WebViews (403 disallowed_useragent) via a native bridge → Custom Tab → redirect flow.

Arjwan Istanbul — Trilingual E-commerce Platform | *arjwan.store* 2026
React, TypeScript, Express, PostgreSQL, Drizzle ORM, esbuild, Vercel

- Built a live Arabic/English/Turkish storefront for a perfume brand with full RTL, localizing product content in the database.
- Designed a sequential discount engine for "every 2nd item" promotions that resolves conflicting rules at the unit level.
- Built a JWT-secured admin dashboard for the non-technical owner (products, promotions, bundles, orders, images); bundled the Express API with esbuild to run on Vercel serverless.

EXPERIENCE

Web Developer Intern — Alemi Medya Jul 2025 – Sep 2025

- Built and shipped responsive websites in a team using HTML, CSS, JavaScript, Tailwind CSS, Bootstrap and React.

Operations Manager — Travel Time Agency Sep 2021 – May 2025

- Ran daily booking and ticketing operations on enterprise travel systems (Galileo GDS, Quickress) for 3+ years.

Program Coordinator (Volunteer) — Al-Rowad Training Program 2023 – Present

- Coordinated 37 sessions (150+ hours) per cohort across 3 cycles, liaising with 15+ speakers per cycle.

EDUCATION

B.Sc. Software Engineering — Haliç University, Istanbul Expected Feb 2027
Graduation Project: Low-Cost Electronic Nose — TinyML Scent Classification (Python, scikit-learn, Edge Impulse)

- Built a pipeline classifying 8 scents from 8-channel gas-sensor data on a public 1,030-recording dataset, comparing an INT8 TinyML model with an MLP: 85% holdout accuracy, 79% under 5-fold cross-validation.
- Ran a cross-session evaluation exposing an accuracy drop to 20–36% across recording days, traced to temperature/humidity shortcuts and sensor drift.
